

Task 6

- 1- In mobile apps world, there is a commonly used part used mainly in filter screens called **fast filter bar**, it is used for the quick filtration instead of navigating to filter screen, the fast filter bar is shown below:

Requirements:

- A- Design a fast filter bar make sure it is scrollable **horizontally**.
 - B- Each current item in the bar must be colored Red.
 - C- The unselected item must be grey.
 - D- The previous action happens **on tap** any item of the bar.
 - E- Handle state management using **both** setState and Cubit.
- 2- Make Text field, and give it a suffiex Icon (eye icon), and on tap it, it changes to (eye hidden icon) and hide password, on tap the hidden eye, return to the eye icon and show pass again. (Using cubit and set state)
- 3- Make 20 radio, and use one cubit with **one function with one state** to switch between them.

4- Do today's example Using both SetState and Cubit.
